Transforming ML Engineering:  
**A Kubernetes Adoption Journey**

# JP|Politiken Media Group

# Building an ML platform for research

Simplifying the training and serving of models

Flexibility to use different libraries

Self-service for model training and serving

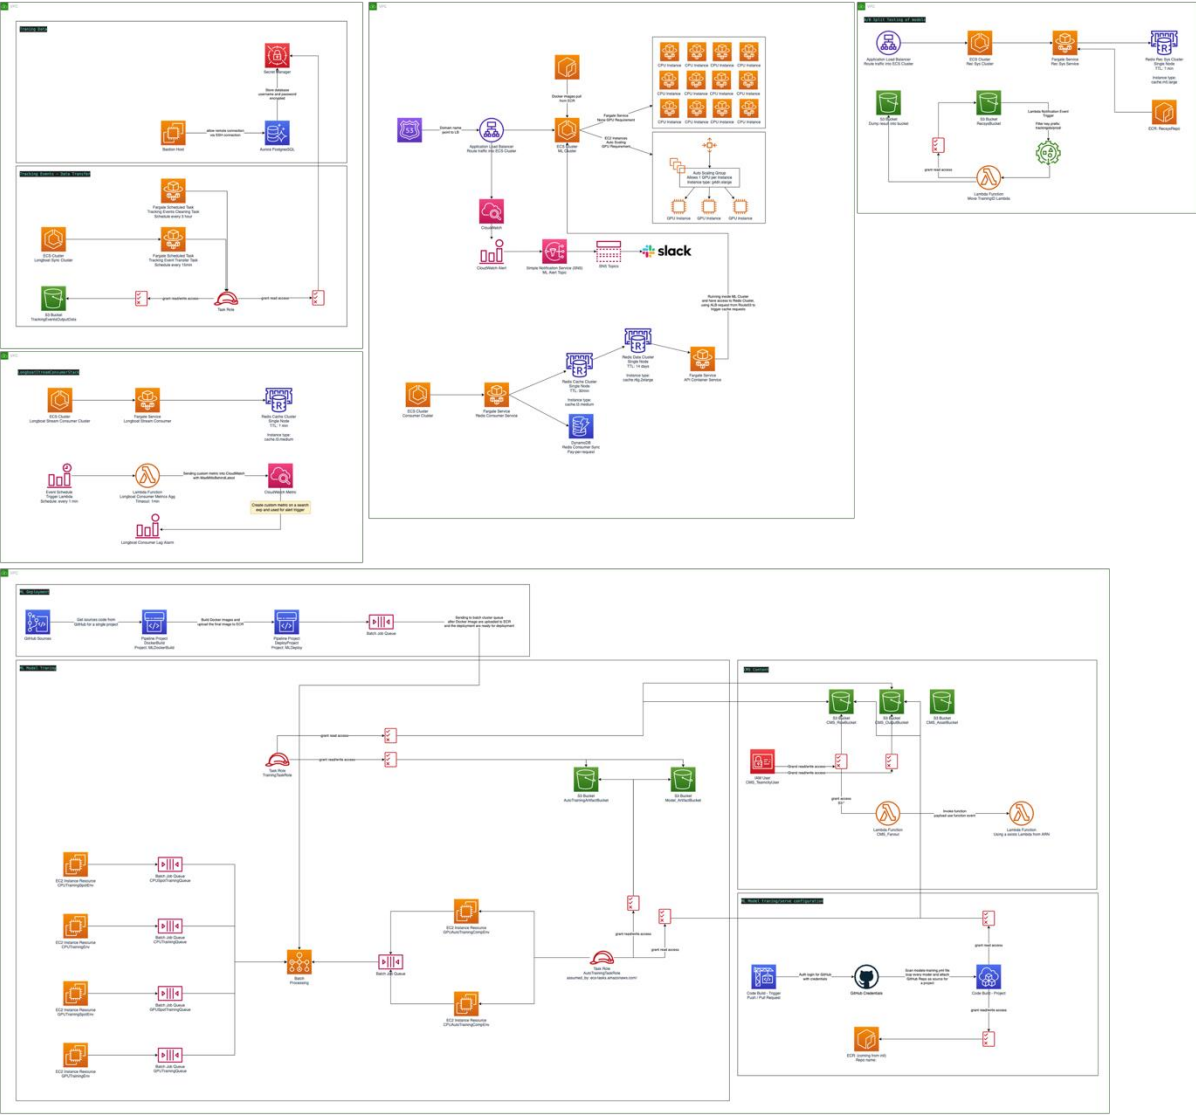

Error reporting and monitoring of the models

Full control over the platform and resources

# The chaos

# Understanding challenges and limitations of our ML platform

Strict limits on ML model training and deployment

Issues with testing and retraining models

Knowledge requirements for ML platform changes

Resource allocation challenges in cloud computing

# Lessons learned from building our ML platform

Streamlining infrastructure management

Gaining control over the ML platform

Enhancing collaboration and onboarding

# Rethinking, rebuilding, and making informed decisions

# Why we tried to optimize again

Platform stability

Balancing old and new

A growing team

Increased flexibility and deployment

# Was the new version a success?

Platform stability

Increased flexibility and deployment

Flexibility to run software as desired

Faster onboarding of new employees

# The rethinking period: exploring options

# It's time to stop and rethink what our expected goal should be!

Consider another attempt to build our own ML Platform

Evaluate existing solutions

Leverage Kubernetes for flexibility

# Why not existing solutions

Effort vs. benefit

Unreliable updates and limited support

Need for greater flexibility and transparency

Faster onboarding for new employees

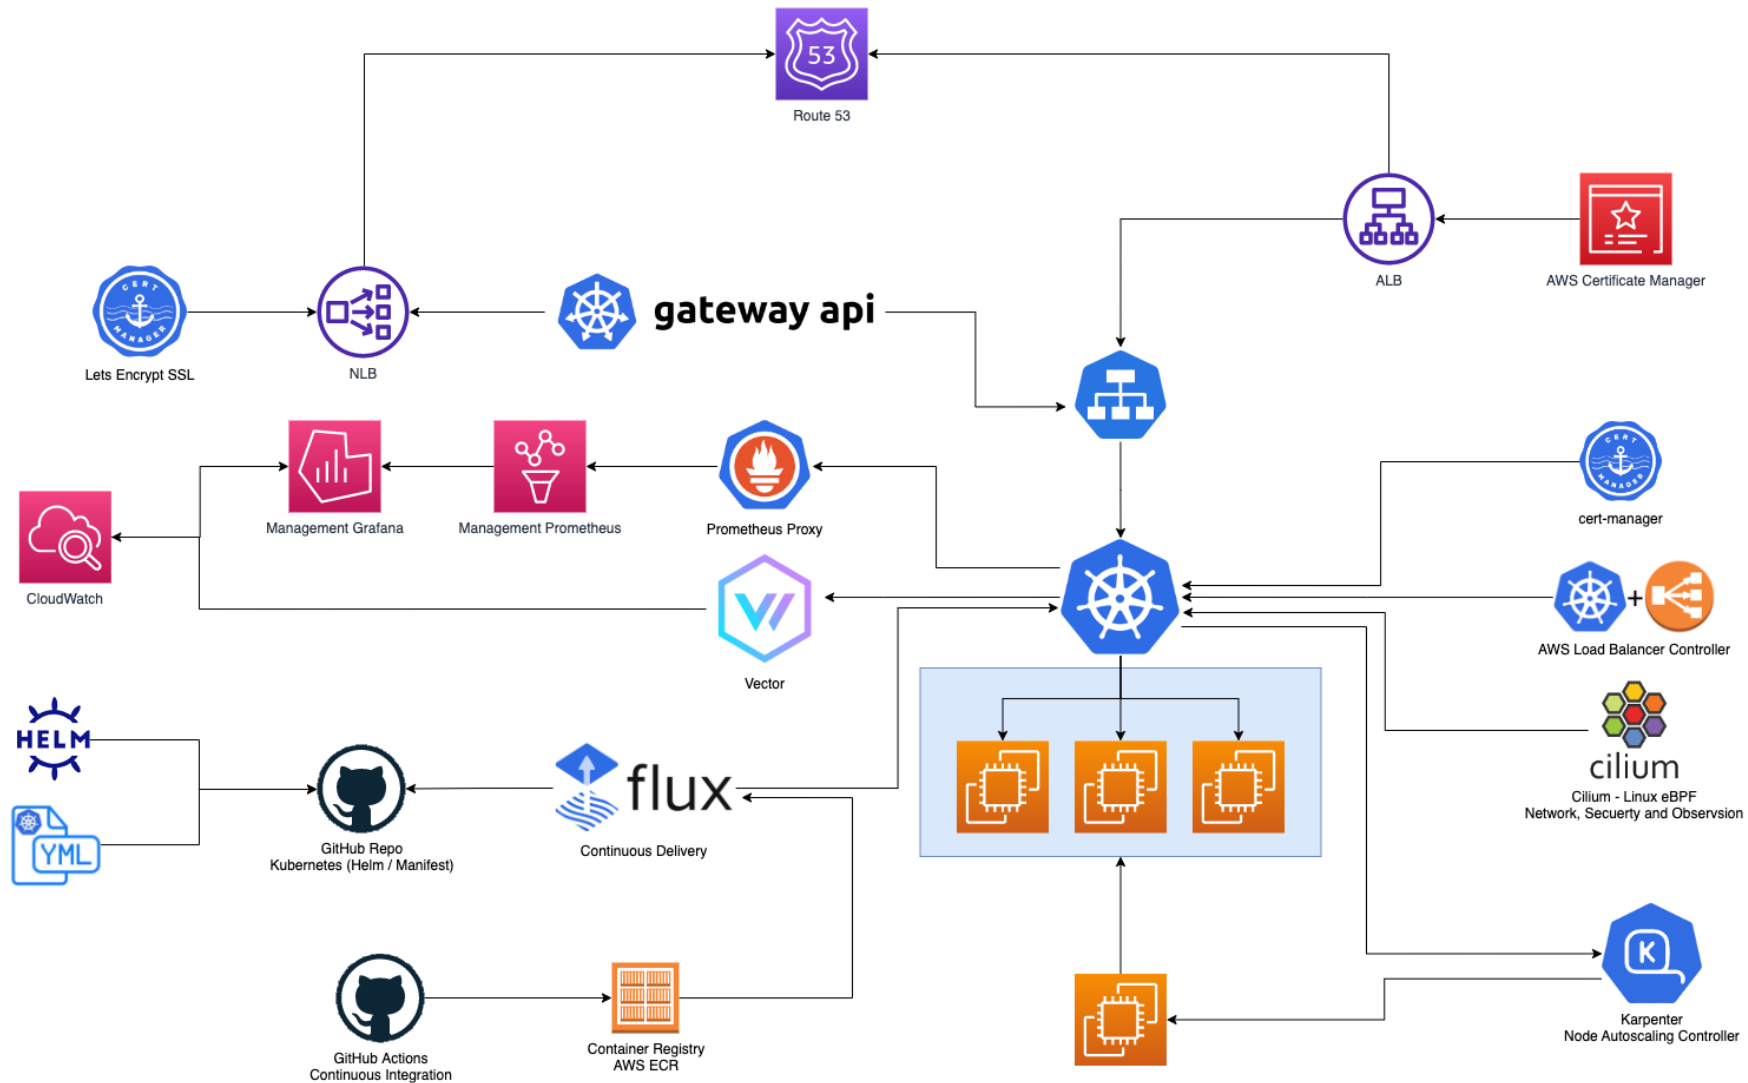

# Why we landed on Kubernetes

- Simplified resource management
- Faster debugging, testing and development for ML specialists
- Freedom to prototype and test
- Faster onboarding
- Less infrastructure knowledge required

# Benefits realized with Kubernetes

- Accelerated CI/CD with GitOps principles
- Enchanted debugging and development
- Seamless autoscaling
- Increased agility and efficiency
- Easier observability
- Easier security

# Our new ML architecture is born!

# Applied software in Kubernetes

# Automation (CI/CD)

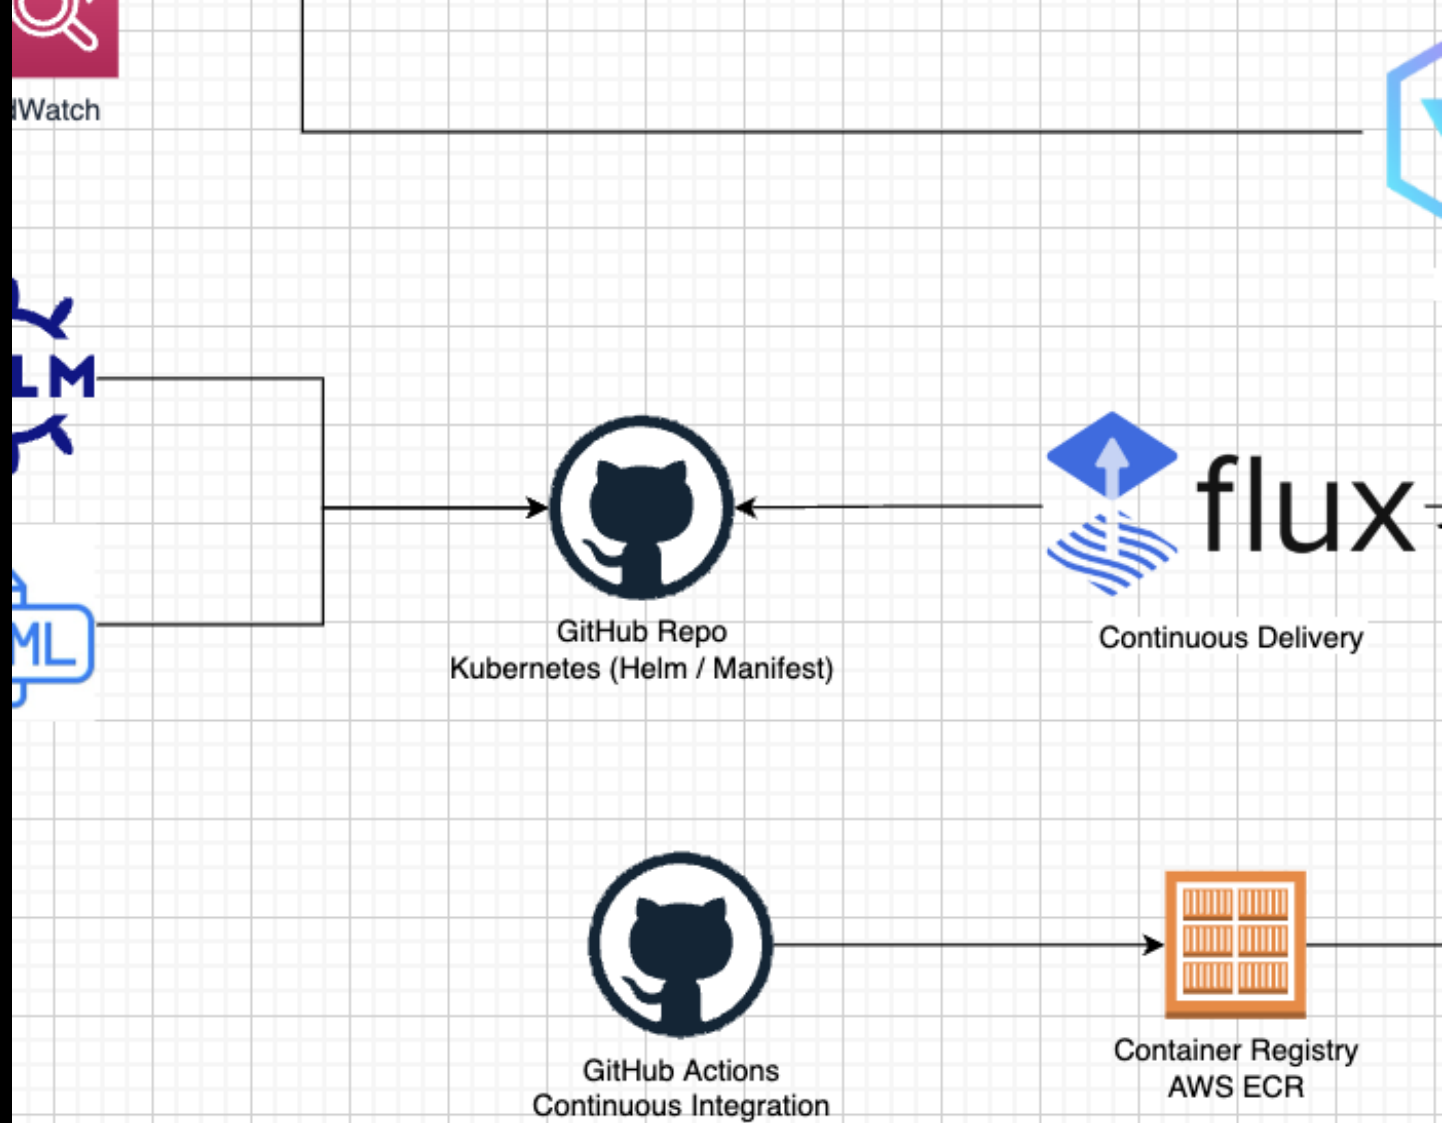

Flux

Helm Charts

GitHub

# Security and Networking

Cilium

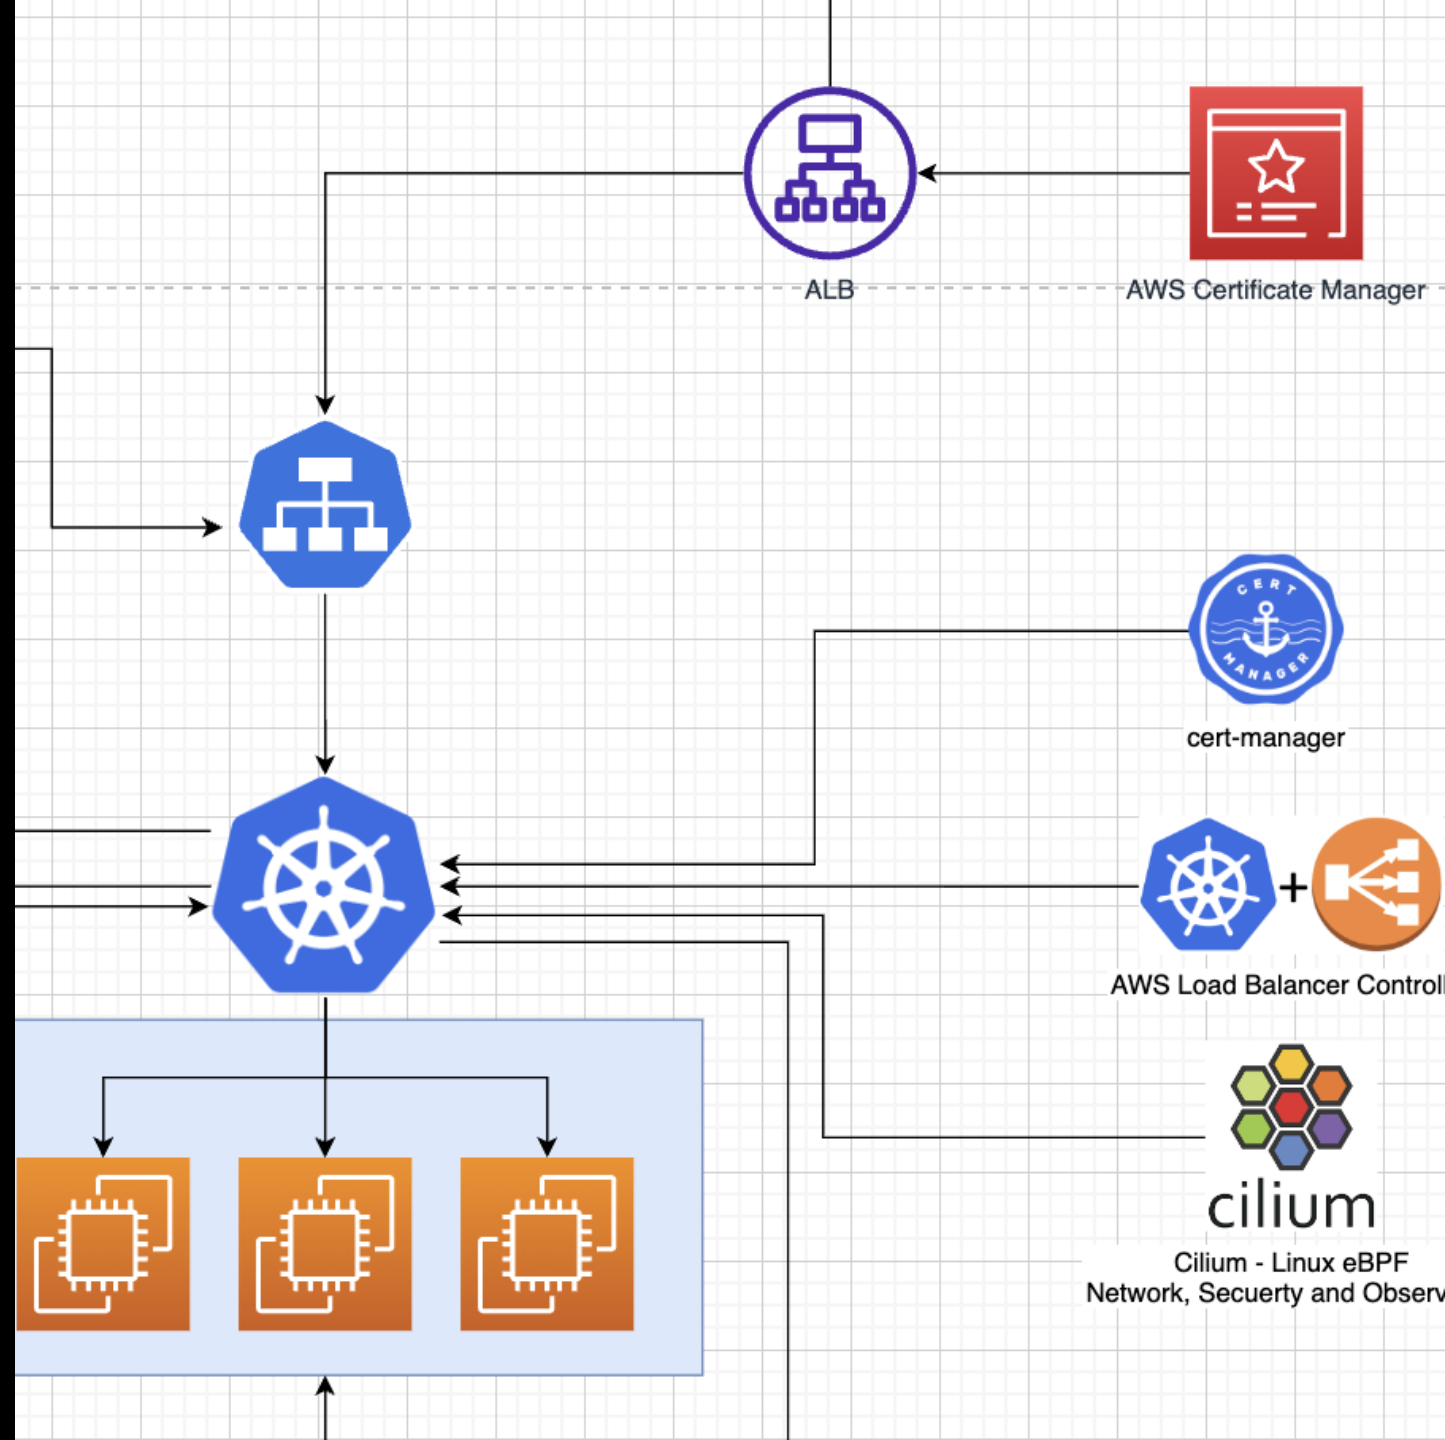

Cert-manager

Gateway API

AWS LB-Controller

# Observability

Prometheus

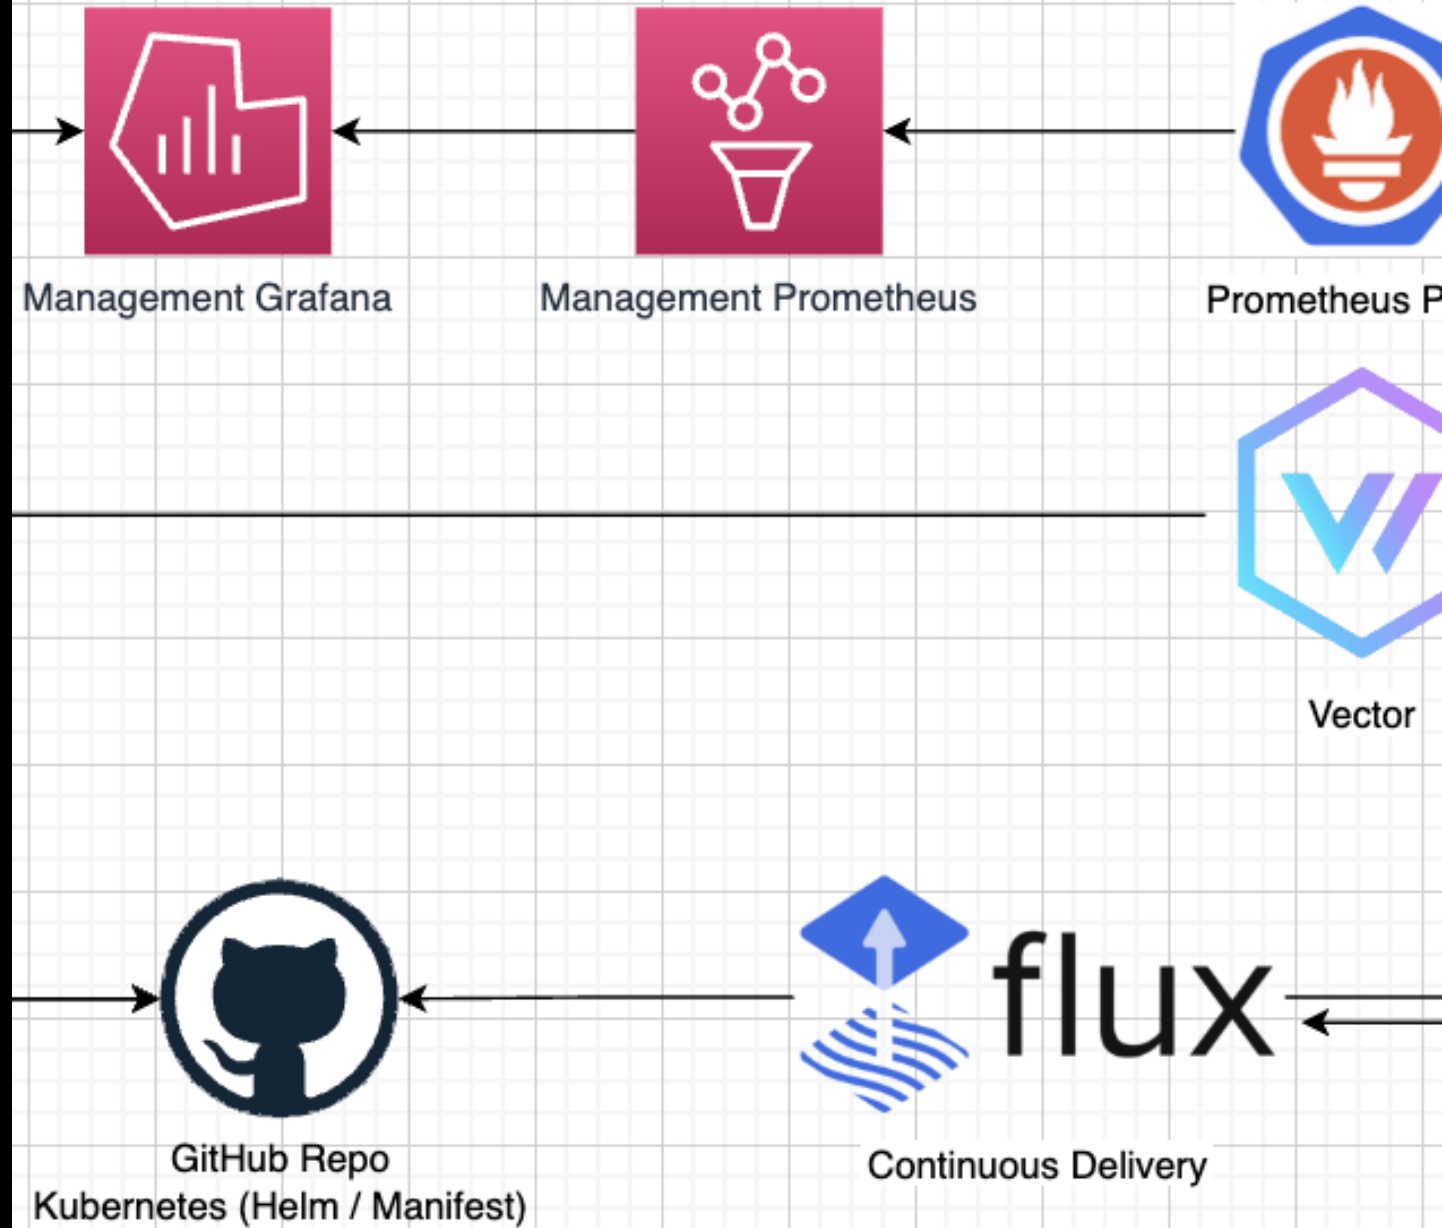

Grafana

Vector

Hubble

# Scalability

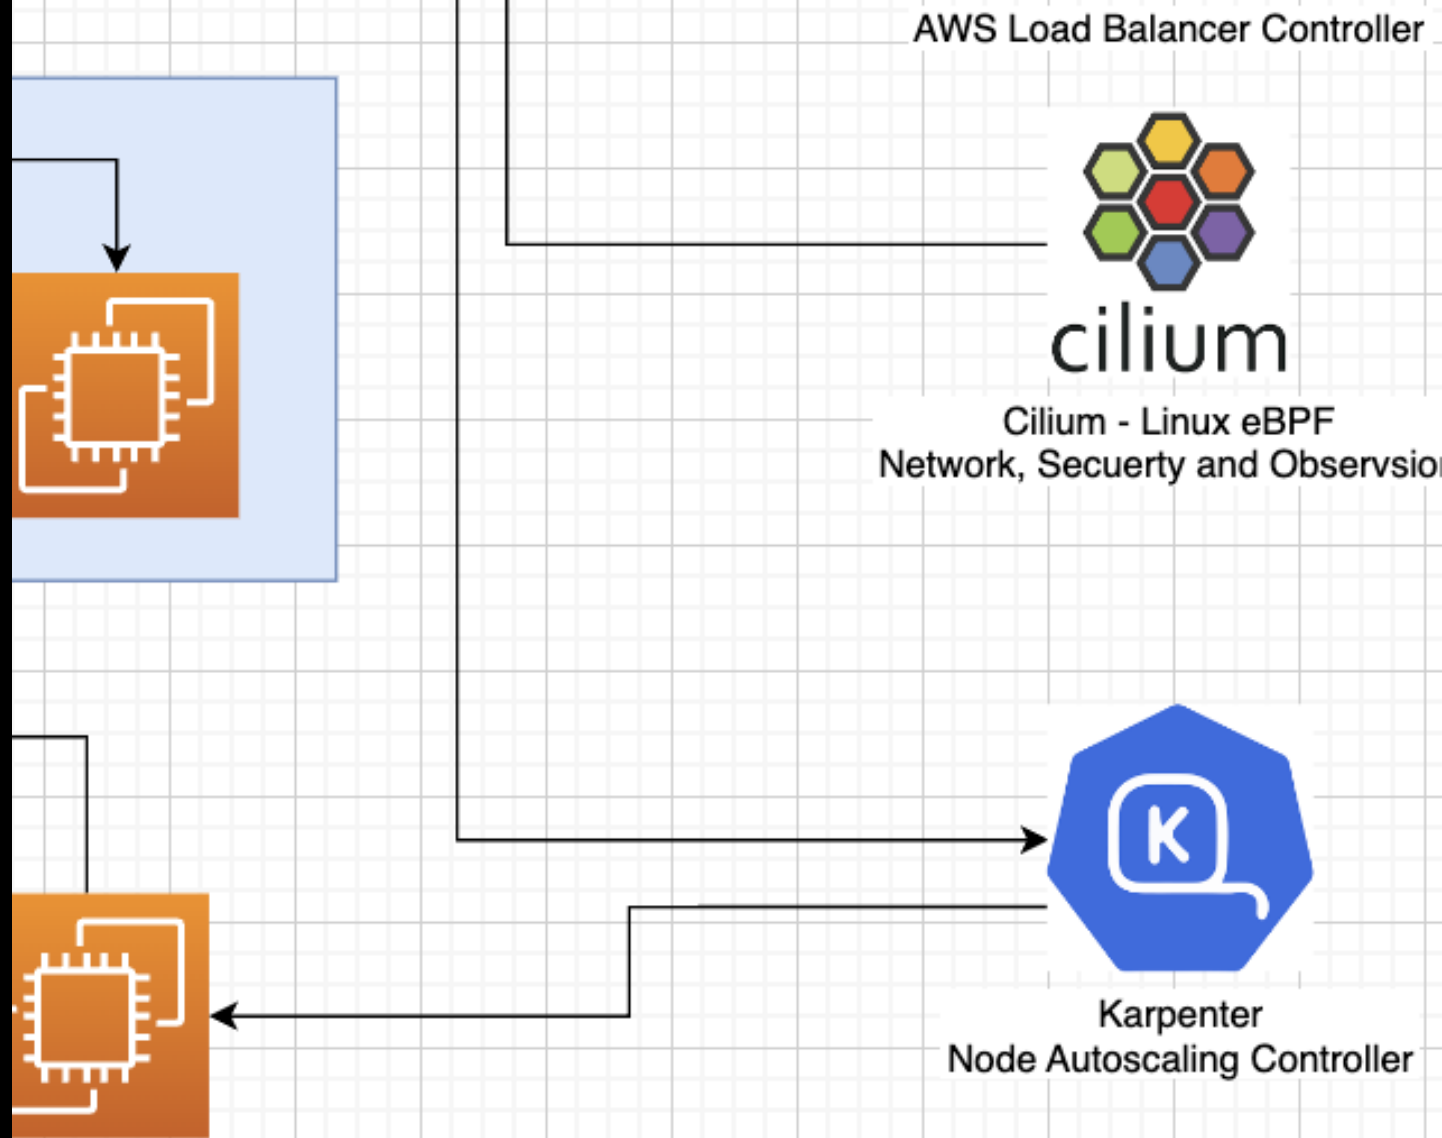

Karpenter

K8s metrics API

HPA

# Thanks
