# CloudEvents as APIs

Evan Anderson, *Stacklok*

Allow many other systems to react to changes without tight coupling.

Defer immediate work from an RPC for later.

Store results of operations as CloudEvents for internal or external consumption.

Document your metadata!

For each **type**:

- What is **source**, **subject**, etc.
- What custom metadata fields are used
- What is **datacontenttype**
- What does the **payload** look like (schema, etc)
